

## Smart Irrigation 9VDC PUMP RELAY

Pump control allows you to manage the switching on of a pump via Pure Vision control units. Once the pump control is connected to the control unit, it will be enough to convert the first zone of the control unit to a pump control via the Vision App, in the "pump control" section. From this point on, the first zone will behave as a PUMP output.

### Technical Features

- Inlet: 9Vdc battery controller pulse (with AMP quick connector)
- Output: PUMP contact (NC): max 24V, 1A
- IP68 protection

Codice	Name	Model
200.1300000	9VDC RELEASE	9Vdc pump control
